

Release Notes

No	Module / Function	Version	Type of adjustment	Release Notes
1174	Basic	v2024.1	Improvement	To simplify the update process, the front-end translations are being provided in a new way.
1717	Basic	v2024.1	Fix	An issue where it was not possible to work with Firefox and the latest IMS version has been fixed.
304	Business Process Engine	v2024.1	Fix	It has been ensured that clicking on a table entry in the Confirmation tab opens the correct object.
655	Business Process Engine	v2024.1	Fix	It has been ensured that the Calendar Entries add-on interprets the time value correctly.
1101	Business Process Engine	v2024.1	Improvement	An issue where initiating a BPE sometimes showed a pop-up blocker warning has been improved.
1009	Checks	v2024.1	Fix	It has been ensured that the setting "Number of days" from the check cube is only used for user-related checks.
77	Cubes	v2024.1	Improvement	The initial width of table columns in a Cube pop-up has been improved.
1155	Cubes	v2024.1	Fix	An issue where the axes are not labeled correctly in the risk list Cube has been fixed.
1290	Cubes	v2024.1	Fix	An issue where the bubble in the news Cube was not updated has been fixed.
144	Design and UX	v2024.1	Modification	UI/UX improvement of the reminder mails has been implemented for better usability and user experience.
243	Design and UX	v2024.1	Fix	A rare issue where multiple mails were sent from the information window has been fixed.
372	Documents	v2024.1	Fix	An issue with an incorrect proof path has been fixed.
442	Documents	v2024.1	Fix	An issue with creating a new version in combination with the required executions configuration option has been fixed.
457	Documents	v2024.1	Fix	An issue with editable object fields in a final version has been fixed.
769	Documents	v2024.1	Fix	The date formatting for warning messages regarding from-to dates in documents has been improved.
205	Dynamic Forms	v2024.1	Fix	An issue with opening an image in a versioned object has been fixed.
379	Dynamic Forms	v2024.1	Fix	An issue with the DynamicCalculation function for date fields has been fixed.
444	Dynamic Forms	v2024.1	Improvement	A unique meta key can now be defined for different form fields, which can be used consistently in tables with different object types or workflows. That way, one column can be configured in a configurable cube to display the values with the same meta key. This makes the tables more user-friendly and readable.
512	Dynamic Forms	v2024.1	Improvement	It has been ensured that presets on date fields are possible with all configuration options.
660	Dynamic Forms	v2024.1	Fix	Multi select fields are displayed by name instead of id for the position PDF.
625	Educations	v2024.1	Fix	Inherited skills are considered correctly in all levels of the Organization chart

750	Educations	v2024.1	Fix	An issue where an expired training could not be replaced with a new, valid training has been fixed.
294	Import and Interface	v2024.1	Fix	During CIP migration, it has been ensured that the number of measures to be migrated is correct.
1187	Import and Interface	v2024.1	Fix	An issue where EntraID synchronization ignored user properties and sometimes failed has been fixed.
308	Improvement	v2024.1	Fix	An issue with the organization selection on CIPs has been fixed.
26	Integrated Authentication	v2024.1	Feature	Azure AD multi-tenancy is supported
251	Master Data General	v2024.1	Improvement	The save button on master data pages has been better positioned.
588	Master Data General	v2024.1	Fix	An issue with too many elements on the object types master data page has been fixed.
31	Modeler	v2024.1	Modification	It has been ensured that ImsObject fields can be used in the modeler form.
39	Modeler	v2024.1	Improvement	Live synchronization of modeler and view when process is being edited has been implemented.
50	Modeler	v2024.1	Fix	An issue where a standard process could not be edited in the new modeler has been fixed.
361	Modeler	v2024.1	Feature	Own versions can now be migrated before switching to the new modeler
363	Modeler	v2024.1	Feature	Migration functionality for the new modeler is implemented.
364	Modeler	v2024.1	Feature	When migrating to the new modeler, containers will be available as an additional level of the activity list. This makes it possible to continue using the container structure and make process adjustments at a later date.
1214	Modeler	v2024.1	Improvement	The space used for the activity list graphic has been improved.
1556	Modeler	v2024.1	Fix	An issue with a missing SVG graphic in an activity list has been fixed.
1761	Modeler	v2024.1	Fix	It has been ensured that if a new task is created from an existing unit-specific process step, the existing output is used.
1762	Modeler	v2024.1	Fix	It has been ensured that the Description tab in the process view cannot be edited with the new modeler.
1837	Modeler	v2024.1	Fix	An issue where context-specific elements were shown in a new outgoing path after a cache reset has been fixed.
242	Object Management	v2024.1	Fix	It has been ensured that content document objects are also displayed in the object management tree.
381	Object Management	v2024.1	Feature	For each generic data container type and document folder, the preferred sort order in the tree can now be configured: System order (the order of input) or Sort by name.
386	Object Management	v2024.1	Improvement	It has been ensured that the object management window is not closed after finalizing a content document.
387	Object Management	v2024.1	Fix	An issue where with Firefox the content of the Integration tab in object management was displayed with unnecessary spacing has been fixed.

552	Object Management	v2024.1	Fix	It has been ensured that versionable but workflowless sub-objects of a generic data container are versioned with the parent object.
939	Object Management	v2024.1	Feature	It is now possible to change and translate the root name of object management.
1566	Object Management	v2024.1	Modification	Adding documents to non-versioned GDCs has been simplified.
235	Organization	v2024.1	Improvement	The selection for the organizational unit on the process map was no longer working properly. It has been removed since it was seldom used.
1439	PDF Creation	v2024.1	Improvement	An issue with title and description in the standard tasklist PDF has been fixed.
200	Performance	v2024.1	Improvement	The performance, for example in a search function, has been improved.
1347	Performance	v2024.1	Improvement	A performance improvement for dynamic forms has been implemented.
1056	Permissions	v2024.1	Fix	An issue where the language of a language editor authorization entry was not resolved has been fixed.
1205	Permissions	v2024.1	Improvement	It has been ensured that a denied permissions message is displayed when an unauthorized user opens a link to a SystemConfig page, rather than a server error message.
1433	Permissions	v2024.1	Fix	Authorizations based on standard organizational units are now also handled by the Role Resolver service.
1781	Permissions	v2024.1	Fix	An issue where the BPE module was missing in the global permission page has been fixed.
1053	Process	v2024.1	Fix	In preparation for the new process Modeler, some points were adjusted when drawing task lists.
1128	Process	v2024.1	Fix	An issue where the unit-specific editor could change too much in a standard process has been fixed.
1131	Process	v2024.1	Fix	An issue when creating a unit-specific document in the process has been fixed.
1149	Process	v2024.1	Fix	An issue where a normal task could no longer be converted into a structure has been fixed.
1419	Process	v2024.1	Fix	An issue where the display in the task list was incorrect when a completion task was used has been fixed.
1437	Process	v2024.1	Fix	Two issues with the drawing in task list PDFs have been fixed.
1604	Process	v2024.1	Fix	An issue with the process authorization when the same user had viewer and editor rights has been fixed.
1689	Process	v2024.1	Fix	Issues with SVG activity lists have been resolved.
170	Reporting	v2024.1	Fix	The issue with the error message in the process list evaluation has been fixed.
474	Reporting	v2024.1	Fix	An issue where the form pop-up on the Analytics page could not be edited has been fixed.
1033	Reporting	v2024.1	Fix	An issue where no results were found in the Training management confirmation analytics page has been fixed.
1154	Reporting	v2024.1	Fix	An issue with unreadable data after exporting from Analytics into Excel has been fixed.

179	Risk	v2024.1	Fix	An issue where a new portfolio could not be deleted has been fixed.
530	Risk	v2024.1	Fix	An issue with data loss when deleting the draft of a risk assessment has been fixed.
621	Risk	v2024.1	Improvement	Multiple assignments of risks in control definitions are now possible.
1553	WebDAV	v2024.1	Fix	An issue where a content security error prevented documents from being opened has been fixed.
232	Workflow	v2024.1	Fix	An issue with the permit restart checkbox has been fixed.
404	Workflow	v2024.1	Feature	It is now possible to check a threshold value in the workflow configuration before informing. If too many recipients are defined, the inform step cannot be executed and a corresponding message is displayed.
1235	Workflow	v2024.1	Fix	An issue where, after importing a workflow, the authorizations had no effect has been fixed.
1420	Workflow	v2024.1	Fix	An issue that required reloading the workflow configuration after adding a new output has been fixed.
1444	Workflow	v2024.1	Fix	An issue where the confirmation relevant flag was not displayed correctly for assigned trainings when a 2-step verification workflow was used has been fixed.
1617	Workflow	v2024.1	Fix	An issue where in dynamic intervals (configured via form fields) the next due date was not calculated correctly has been fixed.
1700	Workflow	v2024.1	Fix	An issue where too many Confirmation tabs were shown on the object (when using a 2-step confirmation workflow) has been fixed.
