14.09.2023

1/4

660	Dynamic Forms	v2023.08	Fix	Multi select fields are displayed by name instead of id for the position PDF.
205	Dynamic Forms	v2023.08	Fix	An issue with opening an image in a versioned object has been fixed.
379	Dynamic Forms	v2023.08	Fix	An issue with DynamicCalculation for date fields has been fixed.
512	Dynamic Forms	v2023.08	Improvement	It has been ensured that presets on date fields are possible with all configuration options.
6	Educations	v2023.08	Feature	New functions have been added to the education and training solution: - Trainings can be assigned to one or more skills - Skills can be assigned to one or more trainings - Users can acquire or lose skills - Jobs, organizational units, objects and processes can contain skills or trainings
14	Educations	v2023.08	Feature	New functions have been added to the education and training solution: - Trainings can be assigned to one or more skills - Skills can be assigned to one or more trainings - Users can acquire or lose skills - Jobs, organizational units, objects and processes can contain skills or trainings
178	Educations	v2023.08	Feature	New functions have been added to the education and training solution: - Trainings can be assigned to one or more skills - Skills can be assigned to one or more trainings - Users can acquire or lose skills - Jobs, organizational units, objects and processes can contain skills or trainings
750	Educations	v2023.08	Fix	An issue where an expired training could not be replaced with a new, valid training has been fixed.
59804	Framework	v2023.08	Fix	The interpretation of URL parameters has been improved either to ensure reloading of content in e.g., documents or processes without losing the selected tab or to prevent a misinterpretation of a default value when no KPI module is available.
54478	Framework	v2023.08	Fix	An issue with invalid function roles in the RoleResolver service has been fixed.
58443	Framework	v2023.08	Feature	A microservice which can be used to retrieve content of mailboxes has been created. Supported protocols are Graph, IMAP and POP.
56990	Framework	v2023.08	Improvement	The Cube, RoleResolver and Workflow-Trigger services are becoming more and more important so we consider them mandatory. With this update (and any future update) they will be started automatically if they are not already running.
294	Import and Interface	v2023.08	Fix	During CIP migration, it has been ensured that the number of measures to be migrated is correct.
308	Improvement	v2023.08	Fix	An issue with the organization selection on CIPs has been fixed.
59155	Integrated Authentication	v2023.08	Modification	Several aspects of security have been improved: - An IMS instance with a connection to AzureAD authentication now allows you to configure whether a second authentication mode is allowed or not - The logout button can be hidden completely, even for administrators - The value of the session cookie SameSite flag can be configured
588	Master Data General	v2023.08	Fix	An issue with too many elements on the object types master data page has been fixed.
251	Master Data General	v2023.08	Improvement	The "Save" button on master data pages has been better positioned.
60246	Object management	v2023.08	Feature	A search field is now displayed for tables within Object Management that contain generic data containers.
60244	Object management	v2023.08	Modification	Usability has been improved when a new object item is created in Object Management.

53464	Object management	v2023.08	Fix	It has been ensured that only object types with a workflow can be deactivated.
49466	Object management	v2023.08	Fix	An issue with the tree search in Object Management showing too many elements, mainly documents, has been fixed.
56563	Object management	v2023.08	Improvement	The table for displaying sub-objects in Object Management has been improved.
381	Object Management	v2023.08	Feature	For each generic data container type and document folder, the preferred sort order in the tree can now be configured: System order (the order of input) or Sort by name.
552	Object Management	v2023.08	Fix	It has been ensured that versionable but workflowless sub-objects of a generic data container are versioned with the parent object.
42167	Organization	v2023.08	Improvement	When opening positions in the organization chart, the Checks tab is reloaded asynchronously to reduce the waiting time.
58926	Organization	v2023.08	Fix	An issue where the content of a unit field was no longer displayed in the view mode of the organization chart form has been fixed.
235	Organization	v2023.08	Improvement	The selection for the organizational unit on the process map was no longer working properly. Instead of fixing the selection, the field has been removed since it was almost never used.
43563	PDF creation	v2023.08	Fix	An issue with too small fonts in a process PDF has been fixed. The cause was a calculation problem.
58311	PDF creation	v2023.08	Fix	An issue with creating a PDF from a form with images has been fixed. It occurred only when there was a document without a file.
59338	Performance	v2023.08	Improvement	Optimization of authorization check has been implemented for a better performance experience.
59342	Performance	v2023.08	Improvement	To improve the performance when loading an object, two new general settings have been introduced: - Show neighbor elements in navigation - Show child elements in navigation The settings determine whether these elements should be displayed in the navigation. The default setting is no. If "yes" is set, the elements are loaded for selection in the navigation.
59389	Performance	v2023.08	Improvement	The loading of the tree and sub-objects as well as dynamic values on display pages has been improved.
58353	Permissions	v2023.08	Fix	The functionality of workflow authorization roles E and V has been improved in some specific cases.
46183	Process	v2023.08	Improvement	The editing and access rights of a unit-specific editor to their unit-specific documents in a standard process have been extended.
48328	Process	v2023.08	Fix	An issue where the font in a process PDF was too small has been fixed.
58352	Process	v2023.08	Fix	An issue with the function "Insert shared documents group" being shown even if documents are not licensed has been fixed.
56136	Process	v2023.08	Improvement	The display of newly added jobs or tools to a process phase has been improved. Manual reloading is no longer required.
55163	Process	v2023.08	Fix	It has been ensured that tools based on a shared document group can be removed if the shared document group is no longer used in the process.
1053	Process	v2023.08	Fix	In preparation for the new Process Modeler, some points were adjusted when drawing task lists.
1033	Reporting	v2023.08	Fix	An issue where no results were found in the Training Management Confirmation Analytics page has been fixed.

170	Reporting	v2023.08	Fix	The issue with the error message in the "Process list" evaluation has been fixed.
474	Reporting	v2023.08	Fix	An issue where the form popup on the Analytics page could not be edited has been fixed.
57858	Risk	v2023.08	Fix	It has been ensured that risk portfolios based on standard organizational units use the name defined in the organizational chart.
55052	Risk	v2023.08	Fix	It has been ensured that the language can be changed on the control definition master data pages.
39288	Search	v2023.08	Improvement	It has been ensured that process jump names are found by the search function.
43372	Search	v2023.08	Fix	The dynamic form field types "Matchcode" and "Counter" can now also be used in the search function and the evaluations.
57936	Standards and law management	v2023.08	Fix	The display of assigned standards and laws on the assignment page has been fixed for documents.
60466	Workflow	v2023.08	Fix	A rare issue after completely rebuilding authorization for a workflow has been fixed.
59936	Workflow	v2023.08	Fix	An issue with workflow fields not being shown in a deactivated object has been fixed.
58301	Workflow	v2023.08	Fix	It has been ensured that deleting an object type does not cause any issues, for example if the object type is used as a sub-object in a workflow.
44675	Workflow	v2023.08	Improvement	The display of buttons in the Workflow Wizard has been improved, especially in connection with the confirmation function.
57386	Workflow	v2023.08	Fix	An issue where an incorrect mail link was generated has been fixed.
54456	Workflow	v2023.08	Fix	It has been ensured that the Calendar Entries add-on correctly interprets the time value.
232	Workflow	v2023.08	Fix	An issue with the "Permit restart" workflow checkbox has been fixed.
