

## Release Notes

No	Module / Function	Version	Type of adjustment	Release Notes
2865	Business Process Engine	v2025.1	Fix	An issue where the navigation was not correct when the “open in main object” flag was used has been fixed.
3181	Business Process Engine	v2025.1	Fix	An issue where an empty field was not editable during a restarted process execution has been fixed.
2791	Design and UX	v2025.1	Modification	The default color theme has been adapted to the new IMS colors. This only affects customers who do not use their own color theme.
2984	Dynamic Forms	v2025.1	Feature	It is now possible to perform arithmetic operations on the main object with values from sub-objects.
3185	Dynamic Forms	v2025.1	Modification	An issue with a counter field and the tab key has been fixed.
3139	Dynamic Forms	v2025.1	Modification	In this version, a new placeholder “bymail” has been introduced for presets. This allows the user with this email address to be entered in an lmsObject field.
2885	Import and Interface	v2025.1	Feature	A new feature allows Superusers to export documents from process executions with options to filter by workflow step, document type, and state. Additionally, it supports grouping documents by object, previewing documents before export, and logging the export process into a separate file.
2318	Modeler	v2025.1	Modification	Various issues related to substructures in the new modeler have been fixed or improved, including: Adding and removing standard structures to a standard process, adding and removing unit-specific structures to a standard process, and copying structures to a standard process.
2980	Object Management	v2025.1	Feature	In Object Management, the number of elements displayed per page in a table can be configured to address performance issues in large tables. A global setting, currently set to 20, defines the default paging size for all objects. Additionally, a specific number can be applied for each Generic Data Container (GDC), which takes precedence over the global setting. The paging functionality is activated when the number of sub-objects exceeds the set value. If set to 0, the sub-object table is hidden but remains accessible via the tree view.
3323	Organization	v2025.1	Modification	The “Create manual function role for deleted OU” setting can be used to decide whether a manual function role with the data of the organizational unit (name & ID) should be created when it is deleted.

2528	Organization	v2025.1	Fix	An issue where a standard unit was not found if no translation was available has been fixed.
2709	Performance	v2025.1	Improvement	Performance improvement by expanding TreeView folders with many subfolders.
3230	Permissions	v2025.1	Fix	Various issues with missing authorizations in connection with the Role Resolver Queue Service have been fixed. This affects authorizations for draft processes, draft control definitions and the shared documents window.
3240	Process	v2025.1	Improvement	The new MainT1 (default) and MainT2 options are available in the SVG Topology Strategy setting. These options influence how the activity list graphic is drawn. Tasks that are an end or have a backjump are prioritized, meaning they are drawn immediately as end tasks and are not extended.
2968	Process	v2025.1	Fix	An issue where the editor authorizations were missing when the process was opened via map has been fixed.
2499	Process	v2025.1	Improvement	A tooltip for output names has been added to activity lists. Output names that are shortened with "..." are now readable in view mode.
2893	Process	v2025.1	Fix	An issue when entering the Description field on the Process Overview page has been fixed.
2896	Reporting	v2025.1	Improvement	It has been ensured that only visible columns on an Analytics page are exported to Excel.
2901	Reporting	v2025.1	Improvement	It has been ensured that all check dates are shown in Controldefinition Analytics.
2903	Reporting	v2025.1	Improvement	The Excel export of Analytics result lists has been improved to keep values in text fields with leading zeros, like risk definition identification, as text. For example, 0005 will now be exported as 0005 instead of changing to 5.
3169	Risk	v2025.1	Fix	Two issues with an empty "risk definition" field in control definitions have been fixed.
3091	Workflow	v2025.1	Fix	An issue where dynamic form fields were not displayed by a workflow step in certain cases has been fixed.
